Beaver Slaps Sticker Lab

Cut-ready file template

Page 1 is a 3 in die cut sticker set up the way we print it. Open this PDF in Illustrator, Affinity Designer or CorelDRAW and the two spot swatches below come with it. Copy them into your own file, or design right on page 1.

CutContour (the cut line)

Spot color named exactly CutContour, 100% magenta. Stroke 0.25 pt, no fill, overprint on. One closed path around the outside of your sticker. We cut on it at the size you drew it.

SpotWhite (white ink, clear vinyl only)

Spot color named exactly SpotWhite. Filled shapes where white ink goes under your colors. Leave it out for white vinyl. On clear with no SpotWhite layer, we put white under all your ink for you. Color without SpotWhite under it prints see-through on clear.

Specs

Size: 1 to 10 in on the longest side of the cut line.
Bleed: extend your background at least 1/16 in past the cut line (1/8 in is safer) so no white edge shows.
Keep text and important details at least 1/16 in inside the cut line.
Images 300 ppi at print size. Convert text to outlines.
CMYK or RGB is fine. Don't use the spot names for anything else in your art.

Save and upload

Illustrator: File > Save a Copy > Adobe PDF (PDF/X-4),
or save as .ai with Create PDF Compatible File ticked.
Affinity / CorelDRAW: export PDF and keep spot colors.
Upload at beaverslaps.com/pages/sticker-lab. The builder finds your cut line and shows it as From your file. On clear vinyl it prints white exactly where you put SpotWhite.

Stuck? Text us at 865-291-0369 and we'll set up your file.
